To: Subject: STIC-Biotech/ChemLib 09/771,161

For 09/771,161, pls search:

SID 2: Full-length and oligo search (>20NTs) against the NT and AA data bases.

SID 93: Full-length and oligo search (≥20AAs) against the NT and AA data bases.

THANKS SO VERY MUCH TO THE GREAT STAFF OF STIC!!!!

; Sequence 1, Application US/09748537; Patent No. US20020061833A1; GENERAL INFORMATION:

```
APPLICANT: Chao, Moses V.

APPLICANT: Chao, Moses V.

TILE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILE AND USES THERE
FILE REFERENCE: 07334-316001
CURRENT APPLICATION NUMBER: US/09/748,537

CURRENT FILING DATE: 2000-12-26

PRIOR PELICATION NUMBER: US 09/099,041

PRIOR PELICATION NUMBER: US 09/019,942

PRIOR PELICATION NUMBER: US 09/019,942

PRIOR APPLICATION NUMBER: US 09/019,942

PRIOR PELICATION NUMBER: US 09/019,942

PRIOR APPLICATION NUMBER: US 09/019,943
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CARD-RELATED PROTEIN FAMILY AND USES THEREC

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    684,

/note=2: Not I; NCI CGAP_EDI is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line CS5. The library was constructed according to
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was ligated to an EcoR I adaptor, digested with Not
I, and cloned directionally into pT7T3-Pac vector. The
oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAAGGCT.
